

Customer Relationship Management system

Projects should have option to:

- List all
- Create
- Edit
- Delete
- View single one.

Please do not contain all information on the list – only date (created_at), name, customer e-mail address.

Other tables should have option to:

- List all
- Create
- Edit
- Delete
- View single one.

Functionality to get dst (3.0):

- At least 3 SQL tables – Projects, Customers, Files

Projects:

- name
- created_at
- description
- project income
- project expenditures
- customer (id)

Customers:

- name
- contact_person
- e-mail address,
- full address,
- phone number

Files:

- filename

One project should have one file (invoice)

Functionality to get db (4.0):

Same functionality as the previous one, plus:

Comments:

- project (id)
- title
- content

One project should have multiple comments. There should be a possibility to add a comment while viewing a project.

Files:

Should have more than one file per project (pdf, jpg and png files).

Functionality to get bdb (5.0):

Same functionality as the two previous ones, plus:

Employees:

- name
- surname
- address
- phone number
- e-mail address
- role

One project should have multiple employees assigned to it.
